

We ran the full concordance program on the book *The Count of Monte Cristo* as our large text file.

The output file was 15,488 lines long. A randomly chosen chunk of five consecutive lines from the output file was:

abide: 61367

abilities: 16057 31071

ability: 4168 5327 7384 17373 27298

abject: 12200 52050

abjured: 58797

When we looked through the original text file, we saw that the words are on the specified line numbers.
